DIGITAL LITERACY PROJECT REPORT

Name: Aparna Singh
Registration Number: 25BAI10270
Branch: B. Tech [AIML]
Year: 1st Year
Course Code: CSE0001
Date: 31.03.2026

🟦 Introduction

Digital literacy is an essential skill in today's technology-driven world. It involves the ability to use digital tools effectively, communicate responsibly, and stay safe online. As students, developing digital literacy is important for both academic success and future career growth.

This project was designed to help understand and apply digital skills through practical tasks. It includes creating an infographic, building a digital portfolio, exploring online platforms, practicing professional communication, and learning about cybercrime awareness. Each task provided hands-on experience with real-world digital tools and scenarios. Overall, this project helped improve my confidence in using technology responsibly and effectively in different situations.

🟦 Task 1: Digital Literacy Infographic

For this task, I created a digital literacy awareness infographic using Canva, an online design tool that helps in creating visually appealing graphics. The objective of the infographic was to spread awareness among students about the importance of digital literacy.

The infographic covers key topics such as safe internet practices, useful digital tools, and maintaining a professional online presence. I included points like using strong passwords, avoiding suspicious links, and using platforms such as Google Docs, GitHub, and LinkedIn for academic and professional purposes. The information was presented using icons, colors, and short text to make it easy to understand.

One interesting aspect of this task was learning how to present information creatively. The most challenging part was selecting the right layout and ensuring that the content was not overcrowded. This task helped me understand how visual communication can be used effectively to spread awareness.

🟦 Task 2: Digital Portfolio

In this task, I created my digital portfolio by setting up profiles on GitHub, LinkedIn, and Stack Overflow. These platforms are important for building a professional online presence and enhancing technical knowledge.

On GitHub, I created a profile and added a README file with my personal details and learning goals. On LinkedIn, I updated my education section with my degree and institution. I also explored Stack Overflow, which is a platform where developers ask and answer technical questions. It helps in understanding real-world problems and learning from community solutions.

Each platform serves a unique purpose. GitHub is used to showcase projects, LinkedIn helps in networking with professionals, and Stack Overflow supports learning through discussions and problem-solving. Over the next four years, I plan to use these platforms regularly to improve my skills and prepare for internships.

This task helped me realize the importance of maintaining a strong digital identity.

🟦 Task 3: Platforms

In this task, I explored coding and collaboration platforms. I created an account on a coding platform and attempted a beginner-level problem, which helped me understand the basics of coding challenges and logical thinking.

Additionally, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions related to online safety and digital tools. The form included both multiple-choice and short-answer questions. I also linked the responses to Google Sheets to view and analyse the data collected.

This task helped me gain practical knowledge of tools that are widely used in academics. Coding platforms will help me improve my problem-solving skills, while Google Forms can be used for surveys and data collection. Overall, this task improved my understanding of digital tools and their applications.

🟦 Task 4: Email Etiquette & Communication

In this task, I learned about professional communication through email. I drafted two formal emails: one requesting an assignment extension and another expressing interest in a summer internship. Both emails followed proper structure, including subject lines, greetings, clear content, and professional closing.

I also created a checklist of social media do’s and don’ts, which included guidelines for responsible online behaviour such as avoiding sharing personal information and maintaining respectful communication.

This task helped me understand the importance of clear and polite communication. It showed how improper communication can lead to misunderstandings and highlighted the need for professionalism in digital interactions.

🟦 Task 5: Cybercrime Awareness (Online Payment Fraud)

In this task, I studied online payment fraud, especially related to UPI transactions. I learned how attackers use fake payment requests and misleading messages to trick users into sending money or sharing sensitive details.

I was surprised to learn how easily people can fall victim to such scams due to a lack of awareness. Many users do not understand that receiving money does not require entering a PIN.

As a result of this task, I will be more careful while making online transactions and will always verify payment requests. This task helped me understand the importance of staying alert and informed to avoid cyber threats.

🟦 Conclusion

This project provided valuable knowledge about digital literacy and its importance in daily life. It helped me learn how to use digital tools effectively, communicate professionally, and stay safe online. Each task contributed to improving my practical skills and awareness about online platforms. I also developed a better understanding of cyber threats and how to prevent them. Overall, this project was a useful learning experience that will help me in my academic journey and future career.
